Appreciation Letter from Japan Aerospace Exploration Agency

ASTRO-H (X-ray astronomy satellite) launched in February from Japan. During vibration testing, IMV Tokyo service engineering division has responded immediately to solve the maintenance problem. Therefore, the testing could continue with no delay in schedule. IMV has received the letter of appreciation on March 7, 2016.

When a rocket launches, it causes enormous amount of vibration stresses onto satellite. Vibration test is regarded as one of important qualification test to undergo. IMV Tokyo engineering service division in charge of maintenance of large vibration test system for the satellite is very honoured to receive high evaluation on our customer priority service.
